

Exercise 3

1. Given a following grammar:

1. $E \rightarrow F T$,

2. $T \rightarrow A D F T$,

3. $T \rightarrow e$,

4. $A D \rightarrow +$,

5. $A D \rightarrow -$,

6. $F \rightarrow L K$,

7. $K \rightarrow M U L L K$,

8. $K \rightarrow e$,

9. $M U L \rightarrow *$,

10. $M U L \rightarrow /$,

11. $L \rightarrow (E)$,

12. $L \rightarrow id$

	First set	Follow set
E	$\{ (, id \}$	$\{ \$,) \}$
T	$e + -$	$\$)$
$A D$	$+ -$	$(id$
F	$(id$	$+ - \$)$
K	$e * /$	$+ - \$)$
$M U L$	$* /$	$(id$
L	$(id$	$* / + - \$)$

parry follow.

	id	()	+	-	*	/	\$
E	1	1						
T				3	2	2		3
$A D$					4	5		
F	6	6						
K				8	8	8	7	7
$M U L$							9	10
L	12	11						

a. Find the first and follow sets of the grammar.

b. The parsing table of the grammar

2. From the parsing table in (1), use stack to simulate leftmost derivation as the LL(1) parsing for stream of tokens $id + id * (id + id)$.

No.	Stack	Tokens	Action
1.	\$	$id + id * (id + id) \$$	
2.	$\$ E$	"	$E \rightarrow F T$
...	$\$ T F$	$F \rightarrow L K$

$\$ T K L$

$\$ T K id$

$\$ T K$

$\$ T$

$\$ T F A D$

$\$ T F +$

$\$ T F$

$\$ T K L$

$\$ T K id$

$\$ T K$

$\$ T K L M U L$

$id + id * (id + id) \$$

$+ id * (id + id) \$$

"

$+ id * (id + id) \$$

$id * (id + id) \$$

"

$id * (id + id) \$$

$* (id + id) \$$

$* (id + id) \$$

$L \rightarrow id$

$\rightarrow id$ $\rightarrow id$ $\rightarrow id$ $\rightarrow id$

$K \rightarrow e$

$T \rightarrow A D F T$

$A D \rightarrow +$

$\rightarrow +$ $\rightarrow +$ $\rightarrow +$ $\rightarrow +$

$F \rightarrow L K$

$L \rightarrow id$

$\rightarrow id$

$K \rightarrow M U L L K$

$M U L \rightarrow *$

* (id + id) \$	↪ *
(id + id) \$	$L \rightarrow (E)$
(id + id) \$	↪ (
id + id) \$	$E \rightarrow FT$
"	$F \rightarrow LK$
id + id) \$	$L \rightarrow id$
id + id) \$	↪ id
+ id) \$	$K \rightarrow c$
+ id) \$	$T \rightarrow A D F T$
+ id) \$	$A D \rightarrow +$
+ id) \$	↪ +
id) \$	$F \rightarrow LK$
"	$L \rightarrow id$
id) \$	↪ id
) \$	$K \rightarrow c$
"	$T \rightarrow c$
) \$	↪)
\$	$K \rightarrow c$
	$T \rightarrow c$
\$	Accepted *

3. Given a following grammar:

$E \rightarrow FE'$	1. $E \rightarrow \overset{\text{left recursive}}{E} AD F,$	First
$E' \rightarrow AD FE' \epsilon$	2. $E \rightarrow F,$	E (id
	3. $AD \rightarrow +,$	AD + -
	4. $AD \rightarrow -,$	F (id
$F \rightarrow LF'$	5. $F \rightarrow F MUL L,$	MUL * /
$F' \rightarrow MUL L F' \epsilon$	6. $F \rightarrow L,$	L (id
	7. $MUL \rightarrow *,$	
	8. $MUL \rightarrow /,$	
	9. $L \rightarrow (E),$	
	10. $L \rightarrow id$	

Parse table

	id	()	+	-	*	/	\$
E	1,2	1,2						
AD				3	4			
F	5,6	5,6						
MUL				7	8			
L	10	9						

∴ Cannot not LL(1) #

- Is the grammar LL(1)? Justify your answer. *No, because it has left recursive and*
 - If it's not LL(1), how to change the grammar to LL(1)?
4. The following is a grammar for regular expressions over symbols a and b only, using + in place of | for union, to avoid conflict with the use of vertical bar as a metasymbol in grammars:

rexpr \rightarrow rexpr + rterm rterm	$re \rightarrow re + rt$
rterm \rightarrow rterm rfactor rfactor	$re \rightarrow rt$
rfactor \rightarrow rfactor * rprimary	$rt \rightarrow rt rf$
rprimary \rightarrow a b	$rt \rightarrow rf$
	$rf \rightarrow rf *$
	$rf \rightarrow rp$
	$rp \rightarrow a$
	$rp \rightarrow b$

- Left factor this grammar.
- Does left factoring make the grammar suitable for top-down parsing?
- In addition to left factoring, eliminate left recursion from the original grammar.
- Is the resulting grammar suitable for top-down parsing? Justify your answer.

a) Can't left factor because have no common N , X that $N \rightarrow XY$, $N \rightarrow XZ$

c) eliminate left recursion.

$re \rightarrow rt re'$	$rt \rightarrow rf rt'$	$rf \rightarrow rp rf'$	$rp \rightarrow a$
$re' \rightarrow + rt re' \epsilon$	$rt' \rightarrow rf rt' \epsilon$	$rf' \rightarrow * rf' \epsilon$	$rp \rightarrow b$

d) suitable for top down parsing because it both left-factored and left-recursive.
